EMERGENCY LICENSE TOKENS

PRODUCT OVERVIEW

With ScanWorks' Emergency License Tokens you don't need to worry any more about a PC failure affecting your test operations. Moreover, you have additional flexibility for handling peak-usage periods when another ScanWorks station could help alleviate a potential bottleneck in test. Consider what might happen if the PC that's running your ScanWorks manufacturing test station quits working on the last day of the month, just as you need to ship products. You would have to move ScanWorks to another PC, but you need a license for the second PC and it's 2:00 a.m. and most people have gone home. With a ScanWorks Emergency License Token, you can install ScanWorks on a working PC, connect to the ASSET Maintenance Benefits web site, enter the required information and immediately receive a four-day license for a ScanWorks manufacturing station that will get you through the weekend.

Here's another example. Business is booming and new designs needing boundary-scan tests are overwhelming your test development resources. You could reassign test engineers to JTAG test development, but that would be useless unless they had access to ScanWorks development stations. You are not sure whether the surge in business will continue, so you don't want to invest in purchasing additional stations just yet. With Emergency License Tokens you can simply connect to the ASSET Maintenance Benefits web site and request a 30-day development station license to get you through the peak-usage period. The Emergency License is a single-user license with all of the features of one of your current ScanWorks development stations, but you can specify another PC to run it on.

EMERGENCY LICENSE TOKEN FEATURES

Emergency License Tokens can be purchased in advance with a purchase order for later use or they can be purchased on-line with a credit card as they are needed. The features enabled by each token are identical to an existing ScanWorks station of your choice.

When you "cash in" a token, you assign the license to the host ID of a PC. The Emergency Token license authorizes a single-user license for the specified PC. A token license cannot be added to a network license. If the existing station is a manufacturing station, the Emergency Token License is valid for four days, allowing you plenty of time to contact ASSET to permanently transfer the license to another PC or to return the original host PC to service. If the existing station is a development station, an

Highlights

- 24/7 access to temporary licenses for emergencies and peak-usage periods
- Buy tokens in advance with a purchase order or on-line with a credit card
- Tokens are redeemed on-line, with no manual intervention

Emergency Token License is valid for 30 days, giving you adequate time to get through a peak-usage period or providing enough time for you to decide whether you should purchase another permanent ScanWorks license. Tokens do not expire. They are valid for as long as you own a ScanWorks station.

Emergency License Tokens are provided as a web-based, user-friendly tool for ScanWorks customers. You can of course contact ASSET during normal support hours to transfer licenses at or to purchase limited-term licenses for peak periods. For more information on Emergency License Tokens, contact your ASSET sales representative.
